PRINTED CIRCUIT BOARD MANUFACTURING

Course #234

Printed Circuit Boards are the foundation of virtually all electronic devices. This course will cover single-sided, double-sided and multiplayer printed circuit board manufacturing. The principal toxics involved in the process are discussed. Pollution prevention, and legal requirements are also covered. The emphasis will be on inspection points.

Thursday, February 20th, 2003
8:30 am - 4:30 pm
Cal/EPA Headquarters Building
1001 I Street, Sacramento
Training Room 1

Students will participate in a "mock inspection" at a local facility, using equipment and techniques discussed in the classroom. The field inspection and an exam are required to obtain a certificate of completion. **Safety glasses & Ear Protection are required.** Enrollment fee may apply.
